2024 COMPANY PRESENTATION

Legal Disclaimer

This material includes “forward-looking” statements or information within the meaning of Canadian securities legislation and the United States Private Securities Litigation Reform Act of 1995. Forward-looking statements relate to, among other things, future events, circumstances and conditions, including the anticipated performance of Integral Metals Corp. (“the Company” or “Integral”) and its operating plans and strategies, and reflect management’s expectations, objectives or beliefs regarding such future events, circumstances and conditions. In certain cases, forward-looking statements can be identified by the use of words such as “expect”, “anticipate”, “estimate”, “potentially”, “possibly”, “intend”, “plan” or variations of such words and phrases or statements that certain actions, events or results “may”, “could”, “would”, “might”, or “will be taken”, “will occur” or “will be achieved”, or the negative of these words or comparable terminology. Forward looking statements rely on a number of assumptions which management believes to be reasonable, including assumptions regarding the Company’s ability to obtaining necessary financing, personnel, equipment and permits to complete its proposed exploration plans, the Company’s ability to identify additional properties for exploration and the demand for and future prices of metals and other commodities.

By their very nature forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause actual results, actions, events, conditions, performance or achievements to be materially different from those expressed or implied by the forward-looking statements. Such factors include various risks related to the Company’s ability to continue as a going concern and meet its financial commitments, the Company’s operations, fluctuations in the market price of gallium, germanium and other metals, the Company’s dependence on a few mineral properties, changes in national and local governments in Canada and more generally, the speculative nature of mineral exploration and development, risks associated with obtaining necessary permits, compliance with applicable laws and changes in laws and regulations that may impose restrictions on mining, limitations in respect of management time and resources, lack of personnel and equipment necessary to carry out the Company’s proposed exploration and development plans, delays (including in obtaining financing) which could result in the Company missing expected timelines, and the fact that the Company may not be able to identify additional mineral properties for acquisition or option on acceptable terms.

Although the Company has attempted to identify important factors that could cause actual results, actions, events, conditions, performance or achievements to be materially different from those expressed or implied by the forward-looking statements, there may be other factors that cause its performance not to be as anticipated. The Company neither intends nor assumes any obligation to update forward-looking statements or information to reflect changes in assumptions or circumstances other than as required by applicable law. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those currently anticipated. The information contained in this document is drawn from sources believed to be reliable, but

the accuracy and completeness of the information is not guaranteed, nor does the Company assume any liability. The Company disclaims all responsibility and accepts no liability (including negligence) for the consequences for any person acting, or refraining from acting, on such information.

This presentation includes market data and forecasts with respect to current and projected market sizes which were obtained from third party sources, industry reports and publications, websites and other publicly available information. We believe that the market and economic data presented throughout in this presentation is accurate, but there can be no assurance as to the accuracy or completeness thereof. The accuracy and completeness of the market and economic data presented throughout this presentation are not guaranteed and we do not make any representation as to the accuracy of such data. Actual outcomes may vary materially from those forecast in such reports or publications, and the prospect for material variation can be expected to increase as the length of the forecast period increases. Although we believe it to be reliable, we have not independently verified any of the data from third party sources referred to in this presentation, analyzed or verified the underlying studies or surveys relied upon or referred to by such sources, or ascertained the underlying market, economic and other assumptions relied upon by such sources. Market and economic data are subject to variations and cannot be verified due to limits on the availability and reliability of data inputs, the voluntary nature of the data gathering process and other limitations and uncertainties inherent in any statistical survey.

This document is neither an offer nor the solicitation of an offer to sell or purchase any investment. Any unauthorized use, disclosure, distribution or copying of this document by anyone other than the intended recipient is strictly prohibited.

The scientific and technical information contained in this Corporate Presentation relating to the KAP Project has been reviewed and approved by Dr. Jared Suchan, P. Geo, the Vice President, Exploration, of the Company and a “Qualified Person” as defined by National Instrument 43-101. For further information regarding the Kap Project, including further details regarding the exploration discussed in this presentation, such as sample, analytical and testing results, data verification measures and quality assurance/quality control measures, please see the Company’s technical report with respect to the Kap Project entitled “Technical Report on the KAP Property, Mackenzie Mountains, Northwest Territories, Canada” filed on the Company’s SEDAR+ profile at www.sedarplus.ca on July 4, 2024.

The scientific and technical information contained on this Corporate Presentation relating to the Burntwood Project has been reviewed and approved by Dr. Jared Suchan, P. Geo, the Vice President, Exploration, of the Company and a “Qualified Person” as defined by National Instrument 43-101.

Investment Highlights

Critical Minerals Commodity Supply Risk Assessment

China currently controls the global supply of rare earth metals, gallium and germanium and have recently imposed export limits of these critical minerals. Integral Metals is exploring two properties with the goal of contributing to the development of a domestic supply chain for these minerals.

- ✓ **The Pentagon** plans to issue a first-time contract to **US or Canadian** companies to recover gallium due to the Chinese export restrictions.
- ✓ Major Companies such as **NVIDIA** capitalize on gallium innovation for their high-performance AI solutions, requiring a stable and secure source of gallium to meet demand.
- ✓ **Strategic Placement** in mining-friendly jurisdictions enhances stability and regulatory support for all properties.
- ✓ China processes and refines nearly **90 percent of the world's rare earths**, giving them a **monopoly** in the sector.
- ✓ The IEA forecasts global demand for rare earth metals will **increase by much as seven-fold** over the two decades to 2040, underpinned by world's transition from **carbon-intensive energy production**.
- ✓ Canada and the US signed a **partnership** to strengthen the resilience of **Critical Mineral and Semiconductor supply chains**.

Sources U.S. Geological Survey, January 2023, Mineral Commodity Summaries

Gallium Plays a Unique Role in Modern Military Systems

The United States and other advanced economies purchase gallium from China and refine it further for use in commercial and military applications.

Gallium compounds are key inputs to some advanced U.S. defense systems and, by extension, the DOD supply chain.

Gallium-based semiconductors are vital to the U.S. defense industry, particularly in next-generation missile defense and radar systems, as well as electronic warfare and communications equipment.

GaN (Gallium Nitride) is foundational to nearly all the cutting-edge defense technology that advanced countries produce.

Radio Frequency (RF)

Chips made with gallium are used as power amplifiers to boost the signal power of high-frequency transmitters and receivers.

Uses: Phased-array radars; electronic warfare systems; satellite communications systems; 5G wireless base stations; mobile phones

Optoelectronics

Due to their direct bandgap, gallium-based chips can efficiently convert electricity to visible light.

Uses: LIDAR; infrared/ultraviolet lasers

Gallium Market

Gallium Market Analysis

By Market Players, 2022-2023

- ✓ Gallium compounds are used in semiconductor materials, optoelectronic devices (e.g., laser diodes, light-emitting diodes photodetectors, and solar cells), cancer and malaria chemotherapy, antimicrobial, and dental materials.
- ✓ The growing use of Gallium in the electronics sector is propelling sales opportunities in the market.
- ✓ North America is estimated to hold the leading position in the global gallium market. This is due to the rise in demand of electronic consumer goods.

Germanium Market

- ✓ The largest use of germanium is in the semiconductor industry. Combined with small amounts of arsenic, gallium, indium, antimony, or phosphorus, it is used to make various electronic device components.
- ✓ Germanium is also used in alloys and fluorescent lamps and has military applications in night-vision devices and satellite imagery sensors.
- ✓ The most recent USGS data shows China accounts for 67 percent of raw germanium production
- ✓ Six germanium products were banned by China starting on Aug. 1, 2023, causing an escalating war between Beijing and Washington over access to materials used in making high-tech microchips.

Global Germanium Market
Market forecast to grow at a CAGR of 3.4%

Sources: Research and Markets

Gallium and Germanium Market Dominated by Chinese

China has started restricting exports of gallium, which is key to the semiconductor industry, as the chip war with the US and Canada heats up

- ✓ Under new controls, exporting gallium and germanium from the world's second-largest economy now requires special licenses.
- ✓ These materials, crucial for chip production and with military applications, fall under the scope of the new regulations.
- ✓ China dominates the global gallium and germanium supply chain, producing 98% and 67%, respectively, as reported by the United States Geological Survey (USGS).
- ✓ China has imposed restrictions on U.S. firms associated with the American military, including aerospace company Lockheed Martin.
- ✓ While the U.S. possesses reserves of germanium, it lacks a stockpile of gallium.
- ✓ The U.S. has announced the enforcement of licenses for companies exporting chips to China using U.S. tools or software, regardless of their global production location.

“ Quite simply, if you won't give us chips, we won't give you the materials to make those chips ”

- Colin Hamilton, BMO Investment

Innovation Lightbulb: Critical Minerals and the U.S.-China Chip War

USA and Canada Partnership

Export Restrictions and Pentagon Contract

Due to Chinese export restrictions, the Pentagon plans to issue a first-time contract by year-end to recover gallium —a vital mineral for semiconductors and military radar systems—from U.S. or Canadian companies.

Energy Resource Governance Initiative (ERGI)

Canada and the U.S. signed an MOU confirming Canada’s participation in ERGI, a multi-pronged strategy to reduce reliance on China's critical energy minerals monopoly.

Resilient Supply Chains

Collaborative efforts between the U.S. and Canada aim to establish a strong, environmentally responsible, and resilient North American critical minerals supply chain.

Investments and Funding

The U.S. has announced USD \$39 billion in funding through direct grants, loans, and loan guarantees under the CHIPS Act.

CHIPS and Science Act Impact

The U.S. and Canada will facilitate investment to bolster secure semiconductor supply chains, creating jobs and advancing a cross-border packaging corridor.

Support for Canadian Companies

Canadian companies in critical minerals for electric vehicles and storage batteries are eligible for USD \$250 million Defense Production Act Title III funding.

Chipmaking Metals

Critical Elements for Chipmaking Production

Gallium: Gallium's most prominent use in technology is in the form of Gallium Arsenide (GaAs), a compound semiconductor. GaAs are highly valued in the electronics industry for its superior electron mobility compared to silicon, making it ideal for high-frequency, high-efficiency applications like mobile phones, satellite communications, microwave point-to-point links, and some radar systems. Additionally, gallium is also used in the production of Gallium Nitride (GaN), another semiconductor with applications in LEDs, laser diodes, and high-power transistors. The unique properties of gallium-based semiconductors, such as their ability to operate at higher temperatures and their efficiency in converting electricity into light, make them critical in the advancement of various electronic and optical devices.

Germanium: Germanium is combined with silicon to create silicon-germanium (SiGe) semiconductors. Faster electron mobility and lower power consumption in SiGe chips means they can efficiently work at higher temperatures as compared to pure silicon semiconductors. Germanium-based chips are particularly useful in radio-frequency (RF) applications, such as wireless communication and radar, due to their superior frequency response. These semiconductors are a vital material for progressive innovation in the automotive, telecommunication, and solar industries.

Critical Uses

Companies directly affected by chipmaking metals and Supply Chain.

- ✓ Nvidia, Taiwan semi-conductor, and Intel are some of the largest semiconductor manufacturers and heavily rely on gallium to keep up with the massive demand, especially due to AI
- ✓ Apple, Microchips and semiconductors
- ✓ Tesla, microchips in cars
- ✓ Open AI, heavily uses semiconductors to power its technologies

KAP Property

Project Overview

- ✓ The KAP Property is 100% owned by Integral Metals Corp., located in the Mackenzie Mountains, Northwest Territories, covering 7,500 hectares.
- ✓ Primarily supported by logistical infrastructure in Norman Wells.
- ✓ Features Mississippi Valley Type (MVT) carbonate-hosted zinc-lead mineralization.
- ✓ The Project contains significant concentrations of gallium and germanium.
- ✓ Mineralization is predominantly hosted within the Landry Formation, particularly in the Recrystallized Zone.
- ✓ Recent exploration confirmed the presence of gallium and germanium, validating historical data.

Figure 1: KAP Project Overview

Project Location

- ✓ The KAP Property is located in the Mackenzie Mountains, approximately 160 kilometers west of Wrigley and 220 kilometers south of Norman Wells.
- ✓ The Property feature six 1,250 hectare claims on NTS map sheets 95M06 and 95M07, that were staked on February 8, 2024, and are 100% owned by Integral Metals Corp.
- ✓ Accessible primarily by helicopter on-site, and float-plane to the nearby Dal Lake. Potential for future winter road access along the Redstone River valley.
- ✓ The region's infrastructure includes logistical support from Norman Wells, Tulita, and Wrigley.

Figure 2: KAP Project Location

Project Geology

- ✓ The KAP Property is situated in the Mackenzie Fold Belt, part of the Cordilleran Orogenic Zone.
- ✓ The geological framework includes Paleozoic supracrustal sediments and significant carbonate-hosted mineralization.
- ✓ The Arnica and Landry Formations dominate the local geology, with the Recrystallized Zone hosting the primary mineralization.
- ✓ Extensive granular dolomitization and euhedral quartz needle silicification are key features of the Recrystallized Zone.
- ✓ The geological setting is characterized by broad, gentle anticlines and synclines with low-angle thrust faults and normal block faulting.

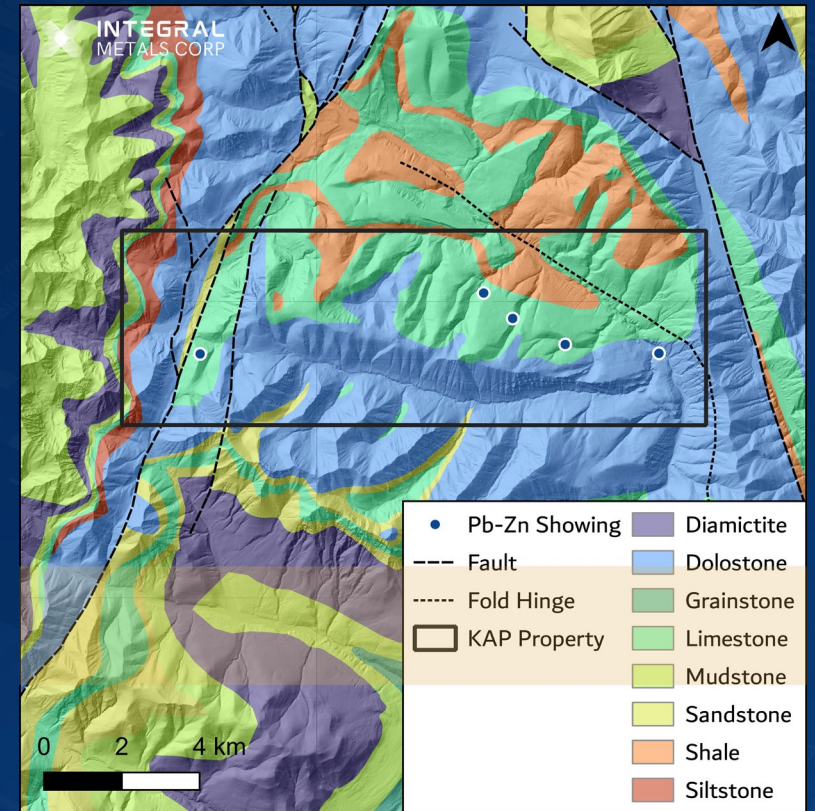

Figure 3: KAP Project Geology

Mineralization

- ✓ Mineralization is predominantly hosted within the Recrystallized Zone of the Landry Formation.
- ✓ Gallium (Ga) and germanium (Ge) were found to occur in notable concentrations with the zinc-bearing sphalerite.
- ✓ Known mineral showings include disseminated and massive sphalerite and galena over a 12 km x 3 km area..
- ✓ The mineralization is stratabound, associated with collapse breccias and secondary porosity in the carbonate host rocks.
- ✓ High potential for additional blind mineralization exists beneath plateau areas, indicated by known mineral showings.

*Averaged across 9 samples taken by Equinox Resources (1986)

Figure 4: KAP Project

Historical Work

Historical work identified multiple mineral showings and significant mineralization trends

1975: 1975: Cominco Ltd. performed a regional exploration program

- ✓ Geological mapping, sampling, trenching, and drilling.

1996: Firesteel Resources Inc. performed geophysical surveying

- ✓ Extended the gravity survey coverage to the northwest and southeast
- ✓ Thirteen drill holes re-tested some of the 1976 holes; tested two of the gravity anomalies; and stepped out from the Main Showing

2024: The 2024 exploration program by Integral involved digitizing and modeling historical data, confirming historical mineralization.

- ✓ Select historical drill holes and gravity surveys were re-analyzed, providing valuable insights for future exploration.
- ✓ Historical drilling confirmed consistent mineralization in the Main showing area, with substantial potential for high-grade zinc within a collapse breccia unit.

Future Work

Upcoming work on the KAP Property

Phase I: Conduct a comprehensive soil geochemical survey on the Property to delineate anomalous zones and identify potential targets for drilling.

- ✓ Focus on areas with historical soil geochemical anomalies and potential extensions of known mineralized zones.

Phase II: Contingent on successful results from Phase 1, implement a targeted diamond drilling program with the intention of extending known mineralized zones.

- ✓ Re-log and re-assay all historical drill holes to update and validate historical data according to modern standards.
- ✓ Drill priority targets identified from gravity surveys and soil geochemical surveys, with particular consideration for the "Grav_Main_3" anomaly.

Continued community consultation to support exploration activities.

Sources

Statista, January 2024, Distribution of rare earths production worldwide as of 2023, by country

Statista, April 2024, Reserves of rare earths worldwide as of 2023, by country

China Holds a Dominant Position in the REE Market

China announced a ban of rare earth extraction and separation technologies on December 21, 2023.

- ✓ China accounted for 69% of world mine production of rare earth metals followed by the United States, Myanmar, and Australia.
- ✓ These materials, crucial for chip production, agriculture, automotive, aerospace, healthcare, power generation and with military applications.
- ✓ China processes and refines nearly 90 percent of the world's rare earths, which means that it is importing rare earths from other countries and processing them. This has given China a near monopoly.
- ✓ The IEA forecasts global demand will increase by much as seven-fold over the two decades to 2040, underpinned by world's transition from carbon-intensive energy production.
- ✓ The United States' delay in developing processing capacity will hinder its ability to build both national, energy and economic security.
- ✓ It is recommended that Congress should incentivize the production of rare earth element magnets, which are the principal end-use for rare earth metals.

“ Swift export restrictions highlight the urgent need for U.S. to bolster domestic capabilities and international collaboration in critical minerals. ”

- Gracelin Baskaran, Center For Strategic & International Studies

Burntwood Project

Project Overview

- ✓ Mineralization is hosted in an intrusive alkaline syenite complex containing numerous recently discovered carbonatites bearing apatite, titanite, and allanite enriched in rare earth elements (REEs).
- ✓ The property comprises an Exploration License that covers 15,000 hectares.
- ✓ Integral Metals Corp. owns 100% interest in the Burntwood project area.
- ✓ Accessible from the town of Flin Flon via plane or helicopter. The town provides all essential services.
- ✓ Located near Burntwood Lake, the property is located in the central Kiseynew domain, a metasedimentary basin in the internal zone of the Trans-Hudson orogen. The area is largely underlain by turbiditic metagreywacke of the Burntwood group, and has undergone multiple generations of folding and faulting.

Figure 6: Burntwood Project Overview

Project Location

- ✓ The property is situated approximately 115 kilometers west of Flin Flon, MB, and just 70 kilometers northwest of Snow Lake, MB.
- ✓ The location has historical logging road access, and an active railway 30 kilometers west of the project.
- ✓ Fieldwork and drilling can be performed year-round.
- ✓ Situated on Public Land, outside of protected areas, wildlife management areas, and areas of special management.
- ✓ Positioned in Manitoba's active mining district amongst the producing Lalor and Thompson mines.

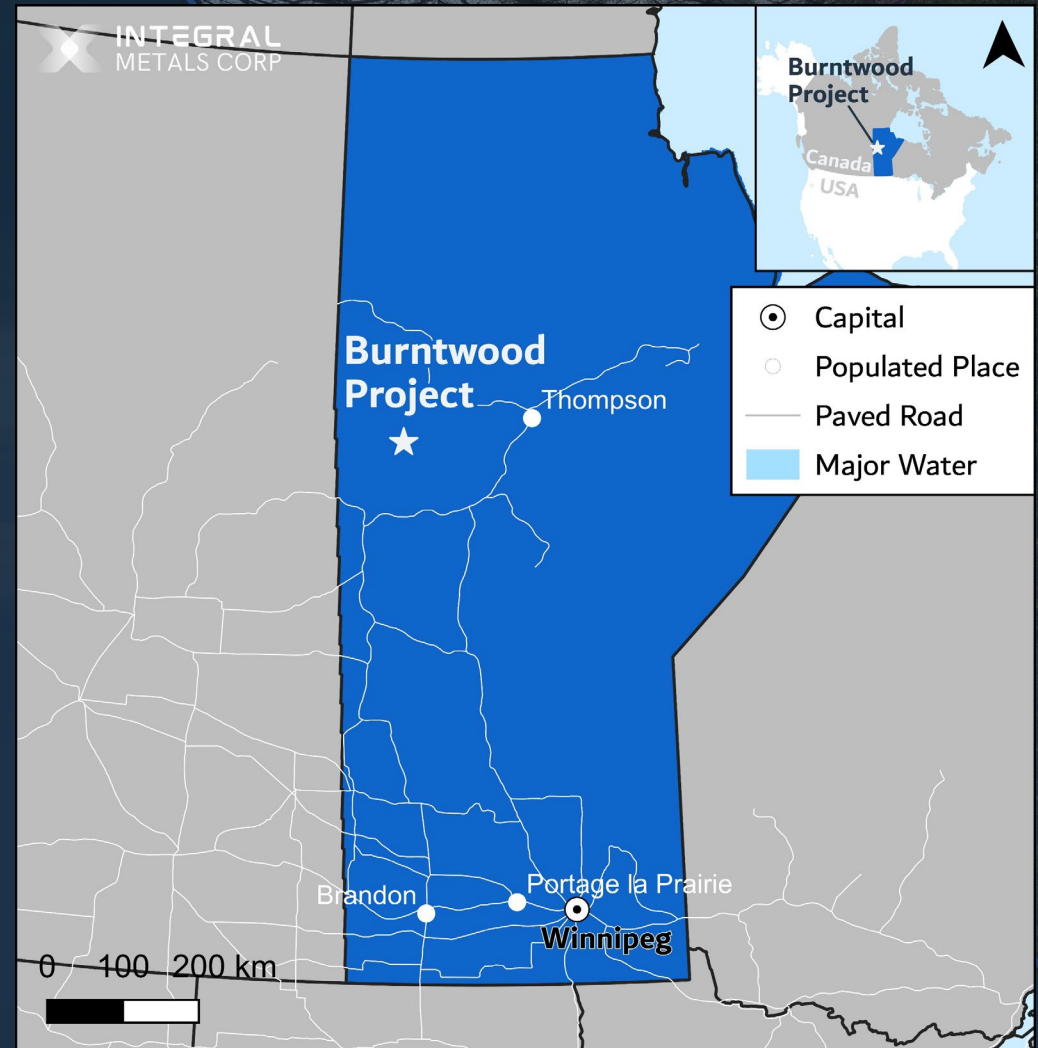

Figure 7: Burntwood Project Location

Project Geology

Location: Central Kiseynew domain, internal zone of the Trans-Hudson Orogen

Syenite complexes within the Trans-Hudson orogen are the subject of exploration for Rare Earth Elements.

Geochemistry: Carbonatite isotopic analyses show depleted $\delta^{13}\text{C}$ calcite values

Indicates a mantle-derived carbon sources, associated with enrichment in a variety of economically valuable elements, especially rare-earth elements (REEs), niobium, and phosphates.

Host Rocks: Alkaline igneous syenite complex

The complex is one of a series of alkaline igneous complexes in the Trans-Hudson orogen, two of which are known to host carbonatite intrusions.

Geological Structures: Carbonatite veins, pods, and dikes discovered in the northern part of the alkaline complex

The syenite complex provides a magmatic source that can contribute to the REE mineralization, while the secondary hydrothermal processes (carbonatites) can further enrich these concentrations.

Mineralized Distribution: Carbonatites within a syenite intrusion

Carbonatites are typically enriched in light rare earth elements (LREEs), while syenites may be enriched in heavy rare earth elements (HREEs).

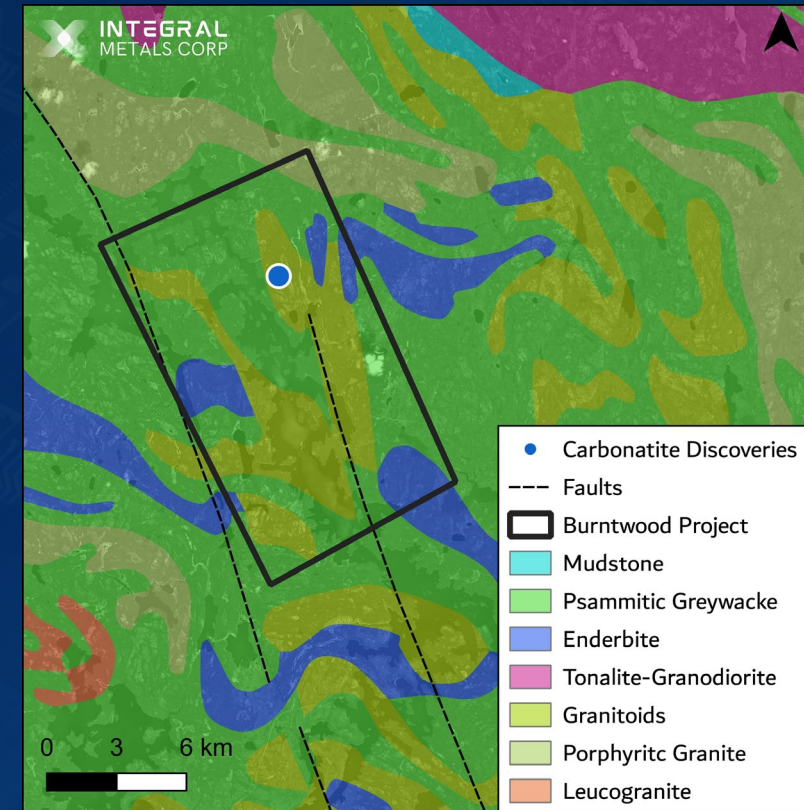

Figure 8: Burntwood Project Geology

Mineralization

- ✓ Recent forest fires have improved exposure and access to previously covered outcrops, revealing new mineralized carbonatite zones.
- ✓ Early work suggests the principal REE-bearing minerals are apatite, titanite, and allanite.
- ✓ Potential for meaningful REE mineralization, exemplified by samples with elevated levels of strontium (up to 12,200 ppm), barium (up to 3,150 ppm), and REEs (up to 4,580 ppm).
- ✓ Rock textures include granoblastic structures which have predictable and uniform breakage that is favorable for mineral processing.
- ✓ The new discovery of carbonatites at Burntwood suggests a broader geological province with additional REE exploration potential.

*Averaged across 9 samples taken by Equinox Resources (1986)

Figure 9: Burntwood Project

Historical Work

1972: Manitoba Geological Survey performed geochemical surveying

- ✓ Two samples of aegirine-augite-bearing syenite were collected near the western end of Burntwood Lake

1987: Manitoba Geological Survey performed mapping

- ✓ Confirmed the existence of a 1.4 km by 2.4 km phacolithic syenite intrusion lying within regionally dominant turbidite-derived migmatites and associated S-type peraluminous granites.

1993: Enterprise Exploration Ltd. performed geophysical, geochemical, and mineralogical surveying

- ✓ An airborne magnetic survey was then followed up with ground-based till sampling targeted at diamond exploration.

2011: Manitoba Geological Survey performed mapping and geological investigation

- ✓ A significant field study assessed the potential for rare earth element (REE) mineralization, noting the syenite's mineralogical, textural, and geochemical similarities to other known carbonatite-hosting syenite complexes, like the Eden Lake complex, which is recognized for its REE potential.

2022: Forest Fire

- ✓ A forest fire in 2022 significantly improved geological exposure in the region by removing substantial vegetative growth.

2023: Manitoba Geological Survey performed mapping and geochemical surveying

- ✓ Improved exposure post-forest fire led to a renewed exploration, which identified several new carbonatite occurrences within the Burntwood Lake complex.

Further Exploration Opportunities

Potential Avenues for Future Work

Magnetic and Imagery Surveys

- ✓ 3D inversion model of subsurface magnetic structures to gain insights into the geological structures that are hosting mineralization
- ✓ High-resolution imagery to detect and map exposed zones of mineralization across the property

Channel Sampling and Geologic Mapping

- ✓ Systematic channel sampling across currently exposed extents of carbonatite for further geochemical analysis, metallurgy and sorting characteristic analysis.
- ✓ Mapping and prospecting new carbonatite zones within the syenite complex and in the northwestern Burntwood Lake area.

Development of Exploration Model

- ✓ Combining the geophysical, geochemical, biogeochemical, and geomicrobial datasets to identify overlapping anomalous areas for follow-up exploration and drill testing.

Integral Metals Team Members

PAUL SPARKES

Chief Executive Officer / Director

Mr. Sparkes is an accomplished business leader and entrepreneur with over twenty-five years of experience in media, finance, capital markets and Canada's political arena. Mr. Sparkes spent a decade as a leader in the broadcast and media industry as CTV Globemedia's Executive Vice President, Corporate Affairs. He also held senior positions in public service, including with the Government of Canada as Director of Operations to Prime Minister, Jean Chretien, and as a senior aide to two Premiers of Newfoundland and Labrador. Mr. Sparkes was a Co-Founder and executive vice chairman at Difference Capital Financial and serves on a number of private and public boards. He is currently President of Otterbury Holdings Inc. and is an advisor and deal maker for growth companies in the private and public markets.

DR. JARED SUCHAN, PH.D., P. GEO.

VP of Exploration

Dr. Suchan is a professional geoscientist with nearly 10 years of experience in the exploration and development of mining projects in Canada. He received his Ph.D. in Environmental Systems Engineering in 2023 and his Honours B.Sc. in Geography and B.Sc. in Geology in 2016 from the University of Regina. His expertise is in the development and execution of early-stage mineral exploration programs in the remote regions of Canada. His previous experience includes coal mining operations and uranium exploration in Saskatchewan, rare earth element and diamond exploration in the Northwest Territories, and gold exploration in the Yukon. Dr. Suchan currently serves as the Chief Operating Officer for the rare earth element exploration company Northern Critical Minerals Corp., and as a Managing Partner with the mineral exploration project generator company Voyageur Exploration Ltd.

TASHEEL JEERH

Chief Financial Officer

Mr. Jeerh, CPA, CA is a finance and accounting professional bringing over 10 years of accounting expertise and management experience to the team. Mr. Jeerh has experience in both public and private sectors, over a broad range of industries, including energy, mining, exploration and technology. Prior to joining the Company, Mr. Jeerh played a pivotal role in the growth of a private upstream oil and gas company, dealing with over \$2.0 billion of M&A activity and \$1.0 billion of financing activities. Mr. Jeerh received his designation at PricewaterhouseCoopers LLP, where he gained valuable audit experience through his work as a manager in the assurance practice.

Integral Metals Board of Directors and Advisors

UNGAD CHADDA

Director

Mr. Chadda is an experienced capital markets regulator and financial services executive having previously worked at TMX Group, the parent company of the Toronto Stock Exchange. Mr. Chadda was responsible for building and maintaining the TMX Group investor base as well as supporting its public interest mandate and strategies to grow as a company. Mr. Chadda joined TMX Group through one of its predecessor entities in 1997. During his tenure, Mr. Chadda held progressively senior roles, including Director of Listings, TSX Venture Exchange; Chief Operating Officer, TSX Venture Exchange; Vice President, Business Development, Toronto Stock Exchange and TSX Venture Exchange; President, Toronto Stock Exchange; CFO of TSX Trust (formerly Equity Transfer and Trust) an OSFI regulated entity; and SVP, Head of Enterprise Corporate Strategy and External Affairs, TMX Group. Ungad currently advises clients on capital markets, regulatory and governance strategies. Mr. Chadda attended McMaster University, where he received an Honours Bachelor of Commerce in 1994 and he received his Chartered Accountancy designation while working with Ernst and Young LLP in 1996. Mr. Chadda has served on multiple boards and has completed the University of Toronto's Rotman Business School Director Education Program.

KEVIN FRAM

Advisor

Mr. Fram brings over 35 years experience in the federal government, principally as a former Public Servant at Fisheries and Oceans Canada, where he held a leadership role in the Indigenous Affairs Directorate. During his time with DFO, Mr. Fram, in partnership with Indigenous groups from across the country, championed the co-development and co-delivery of DFO's Indigenous capacity-building programs. Upon his retirement from the Public Service, Mr. Fram was awarded the David C. Bevan award for Outstanding Career at Fisheries and Oceans Canada. Mr. Fram previously served as Executive Assistant to the Governor General of Canada, Special Assistant to the Prime Minister of Canada, as well as a senior political advisor to several Ministers of Fisheries and Oceans, the Minister of Natural Resources, as well as to the Leader of the Government in the House of Commons.

NICHOLAS THADANEY

Advisor

Mr. Thadaney is a finance, technology and capital markets senior executive with over 25 years experience. He founded Partners Capital Corp. and previously served as Head of the Toronto Stock Exchange in the role of President & CEO, Global Equity Capital Markets, TMX Group and prior to that as CEO of ITG Canada Corp (now Virtu Financial). Before his tenure at ITG, Mr. Thadaney was Vice-President, Business Development (Equities) at C.T. Securities Inc.(Canada Trust), which was later acquired by T.D. Securities Inc. (TD Bank) in 1999. Mr. Thadaney also currently serves as a senior advisor to a number of firms and a director on several boards. Mr. Thadaney has also been a board and committee member of a number of prominent businesses, industry associations, and registered charities, including: Bermuda Stock Exchange; CanDeal; Investment Industry Regulatory Organization of Canada (IIROC); Investment Industry Association of Canada; JA (Junior Achievement) Canada; Mount Sinai Hospital Asset Management Industry Hold'em for Life Charity (Co-Chair); Toronto Financial Services Alliance (now Toronto Finance International); Young Presidents Organization (Ontario Chapter); and the World Federation of Exchanges SME Advisory Board.

RAJ H. CHAHAL

Advisor

Mr. Chahal is an entrepreneur and lawyer with interests in real estate, energy and education. Mr. Chahal has an LLB (Hons) from the London School of Economics and a B.A. in Political Science & Geography from the University of Calgary. Mr. Chahal served as a Western & Northern Desk from 1994–1998 to the Prime Minister of Canada and then from 2001-2003 he served as a Policy Advisor to the Prime Minister of Canada. Currently, he is the Managing Director of Chahal Investment Corp., a Real Estate Development Firm based in Calgary.
